Overview

This document is intended to provide an overview of what projects can be used in the different versions of ATLAS.ti, and what steps, if any, are required in each case. It describes the supported project formats and data exchange paths between the various program versions and platforms.

ATLAS.ti Versions

Below is a list of all ATLAS.ti versions relevant to this document.

Version	Description
ATLAS.ti 8.0 Windows	Dec. 2016
ATLAS.ti 1.5 Mac	expected Jan. 2017
ATLAS.ti 1.0 Mac	2014-2016
ATLAS.ti 7.5	ATLAS.ti 7.5.15 or newer

ATLAS.ti 1.0 for Android	The current Android version

Data Exchange Formats

Below is a description of existing ATLAS.ti storage/exchange formats:

Title	Extension	Description
Project Bundle	.atproj	The Project Bundle is the designated standard project exchange format. It contains the latest data and locator model AHTML2 and is intended for exchange between the 8.0 Windows and Mac 1.5 versions as well as for project backups.
Transfer Bundle 1.1	.atlpac	This is the file format that ATLAS.ti 7 from 7.5.15 on produces when clicking on Export -> Mac Transfer Bundle. It exports a project to the Mac version 1.0 or higher as well as the Windows version 8.
Transfer Bundle 1.0	.atlpac	This is the original project export format for the Mac (via Project >Export) . It contains the older AHTML1 data model and is not compatible with the Windows version 8. Unfortunately, files of this type use the same extensions as Transfer Bundle 1.1, and thus the user has no way of knowing if a given .atlpac file is a Transfer Bundle 1.0 or 1.1. If the import fails, your file is of the older format. See further below for the recommended steps in this case.
Project File	.atlpac	This format is internal to the Mac version 1.0 and is intended for exchange between Mac version 1.0 systems (via Project >Export). It is similar to the ATLAS.ti Transfer Bundle 1.0 , with some internal differences.
Copy Bundle	.atlcb .acb	The standard ATLAS.ti 6.x and 7.x storage/exchange file formats.
Hermeneutic Unit	.hpr6 .hpr7	The standard ATLAS.ti 6.x and 7.x file format (includes only metadata and internal documents, but no primary documents). - All referenced data sources must be available on the computer; paths must be valid.
ATLAS.ti Mobile iPad	.hprx	Formats for transferring projects from iPad and Android apps into ATLAS.ti Windows/Mac. There is a slight difference in the way the iOS and Android versions save the project: hprx stores a project file and document files inside a folder, .hprm compresses the data in an archive file. Otherwise, they are similar.
ATLAS.ti Mobile Android	.hprm	

The following sections describe what project formats can be imported into the different program versions and how to proceed in each case.
