

Version History ATLAS.ti 8

Version 8.4.26

Release date: 2021-08-18

- Fixed licensing issue

Version 8.4.25

Release date: 2020-11-04

- Fixed Excel report of quotations grouped by codes
- Fixed use of regular expressions in stop lists
- Fixed a bug where quotations were shifted when importing mobile project bundles
- Large images now open in fitting window size
- Cleaned up library locations history
- Fixed a crash when importing legacy projects
- Fixed a crash when saving a network view as an image
- Fixed a crash when importing Evernote data
- Fixed a crash when importing PDF documents

Version 8.4.24

Release date: 2020-02-25

- Fixed some rare crashes when attempting to open text documents
- Fixed an issue that caused quotation highlighting to be offset from the actual quotation or not visible at all
- Re-enabled opening quotation in context on single-click in quotation lists

Version 8.4.23

Release date: 2020-01-23

- Fixed issue with codings being invisible in documents

Version 8.4.22

Release date: 2019-12-13

- Fixed Excel export in Inter-Coder Agreement calculations
- Documents use correct fonts again (fixes issues related to missing emojis)
- Fixed a bug where highlighted area was offset from the actual selected range in text documents with tables

Version 8.4.21

Release date: 2019-12-02

- Fixed issue with margin in right-to-left documents
- Fixed display of text quotations ranging across cell borders
- Fixed crash in memo text editor when changing numbered list to bullet list
- Fixed crash on project merge
- Fixed rare crash with empty comments

Version 8.4.20

Release date: 2019-10-08

Various hot fixes

Version 8.4.19

Release date: 2019-10-01

Bug fixes/improvements:

- Improved handling and presentation of text documents
- Fixed broken keyboard shortcuts in text documents: Ctrl+H (Create Quotation), Ctrl+J (Add Coding), and Ctrl+L (Quick Coding)
- Fixed alignment for right-to-left text in memos and comments
- Style edits (color, lists, bold) etc.) in memos and comments are now saved properly
- Fixed bug where spreadsheets did not automatically open after Excel export
- Fixed bug where Focus Group Coding button was accidentally disabled
- Fixed crash when entering code name already in use in coding dialog
- Fixed crash when saving memo or comment containing bi-directional text pasted from elsewhere

Version 8.4.18

Release date: 2019-07-27

Bug fixes/improvements:

- Fixed problem creating memos that affected some users

Version 8.4.17

Release date: 2019-07-25

Bug fixes/improvements:

- Fixed crash when closing the dialog for defining Excel export columns
- Fixed exports results when exporting to Excel
- Improved content migration in the library
- Repaired missing content folder and broken bundle content identifier
- Fixed auto coding and focus group coding in document manager when nothing is selected
- Fixed: Adding code created duplicate codes.
- Removed cancel from the delete dialogs for orphan quotations and codes
- Fixed/improved multiple issues with the Geo Document Viewer
- Fixed issue with not updating stop list combo box in word cruncher dialog when adding new stop list
- Fixed crash when updating node list in a network in the project explorer
- Fixed 'Show Details' and 'Show Percent' checkboxes in Word List
- Added check if quotation can be created in coding actions
- Fixed: Properly updating the word list when exclude buttons are checked/unchecked

Version 8.4.16

Release date: 2019-07-04

Bug fixes/improvements:

- Twitter import works again
- Improved memo and comment editor
- Completely redesigned split code dialog
- Fixed a bug that caused some dialog buttons to be clipped when scaling settings exceeded 100%
- Fixed global filters in word cloud and word list
- Word comparison in word lists and in stop and go lists now uses current culture
- Comments are now merged according to selected strategy in project merge
- QDPX export now supports export of empty groups (they cannot be reimported in ATLAS.ti, though)
- Improved QDPX project import
- Added messages for QDPX project import issues
- Fixed a crash that could occur when copying text to the clipboard in PDF documents
- Fixed a rare crash that could occur when coding quotations or selections
- Fixed a crash in the code document table when word count was selected

Version 8.4.15

Release date: 2019-03-24

Bug fixes/improvements:

- Fixed double click action in the Project Explorer
- Fixed Bug in iPad import: Empty entity names are automatically corrected on Import
- Fixed a bug that allowed words containing invalid characters to be added to stop lists

- Fixed a bug where document scrolled to the wrong position when PDF quotations were opened
- Code Document Table: Global filter in result quotations lists removed
- Fixed a bug where projects were incorrectly marked as defective and could no longer be loaded
- Bug fix for crash when pasting corrupted clipboard data into network editor
- Fixed a rare crash when navigating with keyboard in certain PDF documents
- Added the global filter to the quotation lists
- Fixed a bug where Query Tool did not open when document group was set as global filter
- Bug fix for crash in undo operations related to transcripts
- Fixed a bug where Excel export in manager did not work in rare cases
- Fixed a crash in word list that could occur when right-clicking on the background in the word list
- Fixed a crash when opening word list
- Fixed crash when validating smart code name in the create smart code dialog
- Improvements ribbon context switching behavior in query tool, network editor and analysis tables
- Added some notifications to QDPX import and export

Version 8.4.14

Release date: 2019-03-21

Various bug fixes and minor changes

Version 8.4.13

Release date: 2019-03-18

QDPX: Export projects in new universal exchange format

New and Added Functionality

- Added search field to Project Explorer
- Added comment preview to Project Explorer
- Import/export document groups from Excel
- Insert date and time in comments and memos

Word Lists / Word Cloud Improvements

- Show scope
- Type-Token Ratio

Analysis

- Compress tables by removing empty rows and columns
- More information in the Code Co-occurrence Table
- More information in the Code-Document Table
- Binarize the results of the Code-Document Table
- Networks: Show Code-Documents Connections

Create groups anywhere

- Network Editor: Create Group from selected items of one entity type
- Query Tool: Create Document Group from selected results

Export

- Export data for further statistical analysis (SPSS, R, STATA, SAS, etc.)
- Quotation preview and export everywhere

Reports

- Reports from Quotation Lists in Analysis Tables and Code Manager
- Info sheets for Excel reports
- Include codes in document reports

Usability

- Simplify remove items from selected groups in Managers
- Create smart codes in the Code Manager
- Open Memo on double-click
- Copy Entities Into Pasteboard/Clipboard
- Improved workflow - Reference Manager import

Please see [this page for details](#)

Version 8.3.20

Release date: 2018-12-12

Bug fixes/improvements:

- Fix for a problem on Windows 7 Home Basic introduced and Windows Server Datacenter Edition introduced in 8.3.18

Version 8.3.19

Release date: 2018-12-11

Bug fixes/improvements:

- Fix for a problem on Windows 7 Home Basic introduced in 8.3.18

Version 8.3.18

Release date: 2018-12-10

Bug fixes/improvements:

- Added commented icons in text search results
- Creating new projects with the same name as an existing project no longer possible
- Improved import from ATLAS.ti Cloud
- Search for word in Word Cloud/Word List
- Export: If report bundle creation fails on default folder, a second attempt will be made in the user temp folder
- Added missing arrowheads in network editor
- Fixed: Use of wildcard char ("?") caused a crash in Auto Coding
- Repaired black preview images
- Other bug fixes

Version 8.3.17

Release date: 2018-10-29

Bug fixes/improvements:

- New interface language: Portuguese
- CTRL+S now works universally across project
- Fixed a bug in Default File Location access
- Fixed broken quotation preview switch in NWE
- Word count calculation for the code document table
- Crash when duplicating a Smart Code
- Quotations and codes sorting in grouped Excel export
- Fixed inserting ReTweets

Version 8.3.16

Release date: 2018-09-26

- Import transcripts
- Networks: Add nodes from list
- Find redundant codings
- Store last used search terms in auto coding dialog
- Code-Doc-Table: Show relative frequencies
- Code-Cooc-Table: More Excel export options
- Navigate multimedia documents using keys
- Duplicate document
- Twitter import expanded (now up to 1,000 tweets).
- User-selectable default file location (a solution for the overzealous Windows Defender folder protection)

Please also see [this page for more details](#)

Version 8.2.34

Release date: 2018-08-09

Bug fixes/improvements:

- Fix for Windows %temp% folder issue
- Added additional information re. recent entity reports to SysBundle to better diagnose OutOfMemory crashes

Version 8.2.33

Release date: 2018-07-13

Bug fixes/improvements:

- Global filtering corrected in Code-document table
- Added convert memo into document to right-click menu in Project Explorer

- Removed auto coding button from main ribbon (but the tool is, of course, still available in the Document/Document Group Manager and the Document Viewer)
- Codebook (QDC) export & import improved
- Add notification if a project cannot be saved or exported because of trial license limitations
- Error reporting improved
- Mobile Import: Fixed bugs on quotation name / default name import
- Check for regular expressions in stop/go lists
- Prohibit duplicating a relation type without a name
- Fixed a crash that could occur when undoing delete Code Group
- Fixed crash in auto coding; prevent multiple auto coding processes
- Fixed a bug in Twitter import
- Fixed a bug in word lists when adding to stop list takes long
- Solved a rare crash when using German stemmer
- Fixed bug with Undo/redo when creating new user
- Various other bug fixes and minor improvements

Version 8.2.32

Release date: 2018-05-25

Implemented GDPR Telemetry Compliance and new EULA

Bug fixes/improvements:

- Fixed error description in create free code dialog
- Dragging mixed entities in margin area
- Fixed empty menu in word list control
- Fixed merging relation types
- Set to trial version if setting the license key fails
- Installer to present EULA every time it changes

Version 8.2.31

Release date: 2018-05-18

Bug fixes/improvements:

- Improved multiple selection in Project Explorer
- Improved Stop/Go list import
- Fixed an issue when showing coefficients in Code-Co-Occurrence Table
- Fixed a bug in Network xps export
- Fixed color sorting in code list
- Colors corrected in codebook import (XLSX)
- Quotation previews are now properly updated if location was changed
- Enable report and export buttons when items were added or removed from a manager

Version 8.2.30

Release date: 2018-04-27

- Multiple small bug fixes (Project Explorer, Word Cloud, selections in PDF documents)

Version 8.2.29

Release date: 2018-04-20

- New interface language: Chinese
- Inter-Rater Agreement analysis
- Automatically code focus groups
- Support for importing and exporting codebooks in vendor-independent QDC format
- SPSS export improvements
- PDF annotations can now be displayed
- Document export
- Create multimedia quotations by setting in/out points
- Improved stop/go lists for word cruncher
- Quotation previews in code document table
- Multiple selection in project explorer
- Create multimedia quotations without temporary selection
- Auto-scrolling multimedia margin
- Show start time, end time, duration for selected multimedia quotation
- Print Memos and Comments
- Improve PDF text newline/paragraph detection
- Many bug fixes

Version 8.1.30

Release date: 2018-03-06

- List of quotations now opens when double-clicking code/memo (group), even if there is only one linked quotation
- Unnecessary copies of project library are no longer saved
- Code document table now updates reliably after changes
- Improved Twitter import readout with backlinks to the original Twitter feed
- Improved paragraph detection in multi-column PDFs
- Fixed an issue with quotation IDs in project explorer
- Fixed an issue with renaming a project on import
- Fixed issue where switching library was blocked after working on a project
- Fixed a bug in Chinese PDF import
- Fixed a bug where Twitter Import button stayed disabled when a query was pasted into query field
- Fixed a bug where the selected code in auto coding dialog was reset when pasting text into the text search field

- Fixed a bug that caused the global filter indication bar to be blank when a filter was set
- Fixed a bug where images in imported tweets were not coded correctly
- Fixed a bug where entities kept their commented icon after removing their comment
- Fixed an issue that caused the refresh button in the code document table to be blocked after a global filter was applied
- Fixed several issues with long file and path names
- Fixed multiple crash scenarios

Version 8.1.29

Release date: 2018-02-08

- Improved PDF Text segmentation.
- Improved German and Spanish translations.
- Improved the Create Relation dialog.
- Twitter import now supports long Tweets with multiple images.
- Fixed an issue where images in Twitter imports got distorted.
- Various bug and crash fixes.

Version 8.1.28

Release date: 2017-12-04

- Text block recognition in PDF files improved
- Quotation list popup
- Float/dock memo editor window
- Various bug fixes

Version 8.1.27

Release date: 2017-11-23

- Multi-language interface (English, German and Spanish available for now, other languages to come)
- Global filters
- Switchable library location (create new libraries, switch to different existing libraries, move documents to a different library); supports work from different locations
- Project snapshots (document the work process by saving different versions)
- Savable project preferences (remember windows positions/sizes, open tools, etc.)
- Savable application preferences (customize important aspects of the program)
- Improved work flow for scope option in Query Tool
- Drag and drop in Query Tool
- Word List option replaces Word Cruncher,
- Improved dialog for auto coding
- Universal Excel export
- Import and export of code lists

- Improved team project workflow
- Renaming option when importing projects
- Many reworked and improved dialogs
- Revamped icons

Version 8.0.43

Release date: 2017-09-12

- Fixed a bug that would prevent some users from saving changes to comments and memos

Version 8.0.42

Release date: 2017-08-18

- Fix context menus in document viewer...
- Fix content menus in document editors
- Ignore already coded locations in manual auto coding
- Fix data file declaration in SPSS syntax file
- Fix a bug in the document group section of the SPSS syntax file
- Fix for HTML Editor Control Crashes
- Fix jumping geo quotations in geo viewer
- PDF number of page problem fix
- Improvements to text search control
- Bug fix for survey import
- Preview for Audio and Video
- Project Search: fixed bug

Version 8.0.41

Release date: 2017-06-28

- Bugfix: Rendering of PDF page areas for rotated pages
- Filter VM and Filter UI
- Bugfix for crash on videos without pixel ratio property assignment
- Modify determining quotations for the quotation browser using document and quotation filter
- Modify auto coding confirm dialog to react on changes to the document filter
- Fix code list import for rejecting rows with invalid code names
- Import Codes UI changes
- Added element text content to classification
- CodeCoocTable: fixed overflow bug
- Fixed package content
- Filter codes in auto coding according to global filter

- Global network filters
- Allow content alignment in check boxes
- Added Memory Statistics to System Bundle Report
- Created memory query function
- Fix a bug with smart groups in code list import
- Fix bug with models without entities
- Display Name / Number properties on Quotation
- Hyperlink Preview

Version 8.0.40

Release date: 2017-06-09

- Modify PDF file check
- Survey import update
- Fix for Crashes
- ProjectInfo: added "Archived" info to tooltip
- Project Import: archive only projects with same name and id; rename (pending) work copy
- Resizing corrected for PDF annotation handles; display of quotation annotation corrected in margin
- Projects Integrity Check: fixed report format issue
- Swapped Cooc table resultlist headers
- Project Import: Import of memos or comments pointing to the same content will now create own media instances
- A-Doc: Avoid deleting documents that are part of a DocumentAssociation
- Bundle Import: added archive / delete existing project option

Version 8.0.39

Release date: 2017-06-02

- Better PDF resize annotation handles for multi column selections and quotations
- Query term update correction after failed tests
- Improved updating of query term and query results; Network editor link bugfix
- Rtf2Ahtml Converter Fix
- Fix for HTML framework "toLowerCase" problem.
- Project Export: assembled default bundle file name
- Bundle Transfer & Merge: persist & reuse last used directory paths
- Project Import: restricting int values
- Adapt split code action to support inter coder reliability flag
- Preventing null refs when getting linked quotations
- Bug fix for illegal file names in analytics exports
- Bug fix for PDF control
- Icons Changed

- Archive flag for local library ProjectInfo
- File Name Extension will not be displayed in the treeview
- Change actions and paths in configuration for switching to default library based on the existence of a library in the default path
- Global filters for memos by memo groups and quotations by code
- Project Import: fixed a bug
- Fix issue in using special character filters in word cruncher
- Fix backup name in the backup control and for the merge action...
- Remove global filter if term argument was deleted
- Notify changes when filter source collection changed or filter term arguments collection changed
- Updater: var. improvements
- Fix issue with completed terms when performing coding actions
- Bug fixes; improved term caching in smart groups
- Create new comments when merging, splitting or duplication codes and merging comments
- Drop invalid links when opening the link manager
- Fix a bug with invalid code ranges
- Fix crash in updating smart groups in object explorer
- Minor Crash Fix
- Add backup functionality in Merge Project
- Missing Attribute added
- Work on library switching
- Minor Crash Fix: ignoring Converter property
- Fix a crash in open recent projects control

Version 8.0.38

Not released

Version 8.0.37

Release date: 2017-05-15

- Library Locking: lock related actions and unit tests implemented.
- DeleteCodingLinksAction added.
- Fix for quotation retrieval in context for user "impossible" selection of quotations in text doc. viewer.
- Fix for IOException .
- Application Icon Path fixed.
- Fix word cruncher over groups in document manager.
- Process added to start the command line Roslyn Tool.
- Stuffing memory leaks in cooc-table.
- Access modifier problem during assembly merge solved.

- Fix for ArgumentNullException [Quotation.Layer] .
- Fix for issue JavaScriptException [replaceChild] When Trying to Save Text.
- Fix for Exception on Save Text .
- PDF Clickselection bug fix.
- Fix calculating the word count for the document code table.
- Fix check if the annotation group of an annotation is null when resizing the ...
- Added a numerical preference control.
- Bugfix for PDF text extraction on specific location spanning multiple pages.
- Better check on illegal local db and project db versions.
- Replace ExplicitEntries with IQeryContext in group view models in object
- Add additional system folders to FolderManager.
- Add classes for checking if a path is located in a cloud storage service.
- Fix memory leaks in network editor.
- Fix determining merged quotations for the result.
- Updated to .Net 4.6.2 and VS2017.

Version 8.0.36

Release date: 2017-05-05

- Fix crash with quotations linked to a tag but not to a document in word cruncher.
- Project & Legacy Import: fixed failure on (hyper)link duplicates.
- Fix for WIX installer.
- Add "Core" and "Prerequisites" installed path to registry.
- Fix collection events in object explorer...
- Datatemplates extended.
- Unsafe flag added and a missing project integrated.
- Ignore disposed projects when checking if a project is open. Ignore invalid URLs when importing Endnote import files. .
- Reload word list when opening a word cloud from the word frequency dialog.
- Fix update issue in open project backstage dialog.
- Data template in Sample project changed.
- Legacy Import: Integrated new version of Rtf2Ahtml converter.
- Fix for Vertical Text Scrolling is (Sometimes) Blocked if Windows Scaling has been changed (125%).
- Implemented Model for Preferences System.
- Fixed Memory Leaks in Core Functionality.
- Report/Output: Added (more) debug info to graphic extraction service.
- Fix cyclic references in MSHTML implementation.
- UNC Path Check added.
- Bug fix for export of networks with quotation preview enabled.
- Add coordinator to application session for editing stop word list .

- Fix an issue in the object explorer .
- Improve installer path logic.
- Data inconsistency repair rules improved.
- Set Download Timeout to 20 seconds.
- Reordered coding procedures according to v.7 and consistency.
-

Version 8.0.35

Release date: 2017-04-13

- Fix for project search selection bug.
- Merge Projects & Migrate Medium: fixed bug where media were attempted to be added for different entities with the same guid.
- Global input bindings no longer steal keystrokes from embedded dialogs.
- Twitter: display busy indicator immediately.
- Bugfix: Cleanup AdHoc networks on project load.
- Bug fix when exporting or printing empty network.
- Resolve default PDF text location with valid start and end.
- Use the document name when creating a code using in-vivo coding when only whitespace characters are selected.
- Handle sharing medium in project merge.
- Fixes for HTML Bugs.
- Allow only one auto coding at a time.
- Bugfix for NWE frequency display.
- Fix bug in object explorer for showing quotation or tag count for documents .
- System Report / AHtml Validation: reset LastValidatedHtml property on success .
- System Report: added windows dpi info – enumerating all displays with device name and size.
- Stemmer hot fix, ribbon support & tools, twitter behavior on disconnect.
- Do not perform menu command when the project control is not active.
- Autocoding.
- Define usable titles and Excel report names for word cloud and frequency list .
- Additional null checks for PDF text content.
- Fix some issues with importing notes from Evernote.
- Graphic Location Previews: fixed preview-failures on empty graphic locations for browser preview and report/output content.
- A8 Startup: fixed bug on trial version: validating of project list containing broken projects failed (trial version only).
- Fix extract and convert problems with Evernote notes.
- Additional null check before using Aspose HTML converter.
- Project Bundle Import/Export: added comment support for users.
- Changed tiptext for Import Legacy Project, changed coding action messages.
- Fix updating counts in navigator and object explorer.

- Transactional Collection now correctly trigger Changed event for the Count property.
- Bug fix for ad-hoc network undo problem.

Version 8.0.34

Release date: 2017-03-31

- Added last validated HTML to system report bundle.
- Additional Project Repair Rules.
- Perform Auto-Check and Auto-Repair Async.
- Fix threading issue with warn dialog when survey import failed.
- Ensure that each document is only placed once into the list for documents for auto coding.
- Add Contracts to coding actions for the quotation provide.
- Check if in-vivo coding action is valid prior to executing it.
- Catch exception and inform user crash when the text converter fails in document ... import.
- Fix some settings issues in dialogs and auto coding confirm control.
- System Report: Added version info to folder dump.
- Fix Crash when closing the project while the auto coding confirm dialog is open.
- Speedup opening the object explorer.
- Fix Repair Rule for missing creation log entry when there is no creation log entry but some modification log entries.
- Enhance Endnote Import for references with direct links.
- Fixed AutoTooltip on truncated names, more work on hyperlinkpreview.
- Margin Quotation Context Menu: fixed null reference issue on action for UnlinkAll.
- Deleting all network nodes when deleting entities; do not remove AdHoc network from database any longer because of possible data inconsistency problems.
- Fix for "Size: Width and Height must be non-negative" on some VM's.
- Fix error handle for blocked documents in document import.
- Catch file blocked in word frequency list export.
- Warning if the ATLAS.ti installation is broken.
- Project Repair Request Dialog: (in default text) changed the guid for the project from project id to project library id.
- Bug fixes for auto coding problems with PDF.
- Fix to avoid crashing when adding unsupported multimedia files.
- Warning if MediaFoundation is not installed.
- Fix for sorting exception when opening report on a sorted and filtered list.
- Improved cursor-load stability and temp folder handling.

Version 8.0.33

Release date: 2017-03-22

- Added project repair rules

- Save enumerations as integer in word cruncher UI
- Context menu in NWE corrected
- Fix merge code test
- Report/Output: Catching IOException; added message to close the/a blocking application when trying to save report output
- System Report: Added integrity section to project session part of system report
- Some improvements to prevent D&D errors
- Add checks for missing source tags and smart tags to validation of the merge code action
- Add location column to document manager
- Inform the user to restart ATLAS after resetting the Evernote account
- Merge codes secured in network editor against missing merge code action rules
- Extend annotation bounds with handle positions

Version 8.0.32

Release date: 2017-03-16

- Project Integrity Broken Dialog
- Backup Tagging Tool
- More project repair rules, started hyperlink popup, license dialog remove tab requirement
- Fix a bug in adding document when the source is a memo
- Developer/Project Repair: Added tool to tag a (fixed) backup file as partial restore file
- Restore Tool: added support for partial project migration
- Fixed an issue with illegal characters in an Endnote URL
- Fixed an issue with open coding in DocumentViewer
- Fixed an issue in manual auto coding
- Rendering PDF pages with tiles
- Text No Longer Vanishing When Coding with Keyboard Shortcuts
- Misc. report issues, fixed margin click on overview annotation, Geo search results removed extra highlighting of selected item on mouse over
- Repair model inconsistencies
- Create rule for resolving project in Queries after merge and "save as"
- Fixed an issue with missing or invalid quotation helper in in-vivo coding
- Fixed a threading issue in the merge project control when saving another project

Version 8.0.31

Release date: 2017-02-28

- Fix project bundle ex- and import of illegal PDF graphic locations.
- Bugfix: Virtual links hidden after refresh in NWE.
- Install a repair functionality for finding missing locations to quotations or for creating default locations when no location could be retrieved from other projects.

- Drop on network.
- Project Bundle Import: fix for Mac bundles – top level query terms (“and” or “or”) came with only one operand (even if two or more are specified as required in the schema).
- Model repair rule that removes orphan codings.
- Fix display issue with total count of merged quotations in project merge.
- Fix collect merge conflict unit test.
- Make progress messages in survey import user friendlier.
- Fix cancel in survey import.
- Terminalserver info in sysrep & telemetry on startup.
- Fix small issues with reverse geo coding.
- Bugfix: Change path for EF model cache.
- Catch errors when upgrading settings, rearranged gis-q-tooltip, catch twitter change account errors.
- Update Aspose document converter and survey.
- Add geo coding cache for reducing access to the open street map geo server.
- Speedup merging codes and links in Merge Project action.
- Fix an issue with the step order in the Endnote import step. Catch IO exception when trying to access a referred file in the Endnote import.
- Model repair rule for orphan links.
- Edited message text for failed imports. Fixed gis tooltip, added warning to gis search when not connected.
- Project Bundle Import: fixed crash on older (A7) bundles .
- Bugfix: Negative width or height for rectangle in PDF exchange format from Mac project bundle.
- Fix sanity check for deleted networks; Remove networks from groups when deleted.
- Add address to geo location tool tip.
- Fix numbering issue in merge project.
- Fix issue with merging projects with Geo docs.
- Add address search for Geo Docs.
- Integrated Project-Auto-Repair into project loading.
- Model integrity check rule for NetworkView corrected; Repair projects with orphan links.
- Bug fix: Merge duplicating document and quotation numbers.
- Fix Merge Quotation Unit tests.
- Fix crash when resizing an invalid location.
- Fix crash when quotation providers are not set in coding actions.
- Fix crash when quotation providers do not provide quotations.
- Fix numbering issue in document and quotations while merging projects.
- List/Report: Stripping control characters on text content used for (list)report output.
- Project Bundle Export: Fixed wrong handling of semantic operators in query terms on export – import works already well.
- Support for CTRL+A selection in text documents.
- Fix for need to r-click twice to get context menu in text documents and coding hyperlinks in text documents.

- Catch shell execute errors. They mainly occur when launching an application fails.
- Do not delete deleted quotations (layer is null). Show all projects in the merge project dialog and disable open projects.
- Update project list in merge project dialog when a project is opened or closed.
- Filter deleted quotation when getting documents for a quotation list in the project or text search.
- Fix a bug when trying to add an invalid file.
- Check if session is valid in delete entity helper.
- Modify tests for using transactions and.

Version 8.0.30

Release date: 2017-02-14

- Missing TaskFolder.dll added to setup.
- Work-around for COMException when setting a selection in AHTML documents.
- Fix for D&D Arg-Null-Exception.
- Legacy Import migrated new version of the Rtf2Ahtml2 converter to fix the 3.11 validation error on (legacy) import.
- Added Open Rel Manager button to Network Editor, tried to set focus to a text field.
- Fixed bug in MergeTagsKeep.
- JavaScript Exception – When Trying to Store Comments for DefaultRelationTypes on Project Create. Update of JS library.
- Fix Crash for not fully loaded document.body.
- Option to Enable Disable Sanity Check from Dev Ribbon.
- Merge failed message fixed. Added date and stats to project integrity test.
- Improvements to Project Sanity Checker.
- Handle exceptions in database version check.
- Fix AdHoc-Network data inconsistency on Undo/Redo.
- Legacy Import: fixed issue on user creation method – (adapted from Project Bundle Import). Also restricted sanity check to be done only once after consolidation.
- Mobile Bundle Import: fixed issue on user creation method – (adapted from Project Bundle Import).
- Fix an issue with undefined quotation provider in InVivo coding. Fix an issue with null selection list in split code dialog.

Version 8.0.29

Release date: 2017-01-26

- Diagnostic functionality to trap opened MM preview sharing violation errors.
- Libraries Backup App: Backup&Restore – works (currently) only on default libraries base path.
- Hide query tool tags; Remove deleted groups from networks; Check query tool tags before deleting document groups.
- Automatic Data Integrity Check on Project Load.
- Backup and Restore Application added to Build Script.

- Query term tests corrected.
- Data integrity checks including query terms.
- Backup and Restore Application.
- Data integrity checks (terms missing yet); Store check state in project.
- Fix test setup for two merge tests (user must be added to project and no longer to session).
- Fix copying layers and locations into the master project.
- Sanity Checker.
- Fixes for NullPointerException when clicking on multimedia quotations.
- Do not execute any action if session is already disposed in the tag manager.
- Sanity check to transaction walking algorithm to avoid illegal references .
- Fix an issue with determining the text around a hit in Project or manager queries.
- All space in the list filters in checkable list views.
- Lower PDF memory footprint.
- Added test upon startup to verify that at least 50 temp files can be created; exit if temp folder is full.
- Completed CRG generator, new Dictionary extension addToSet(key,value) very helpful for creating maps.
- Implemented Work-Around for Out-Of-Memory related exception when the PDF framework needs temporary memory bitmaps.
- Use the same rule for finding groups as used by the create group action when creating groups in the survey import.
- Improved better diagnostics to trace errors if the embedded dialog layer crashes.
- Exclude invalid project infos from the welcome screen, the open project lists and the merge project list.
- Prevent EmbeddedDialog Framework from showing hidden windows when the app is closing.
- Fix a bug when creating authors in survey import...
